CHALLENGE 3

1. Réaliser l'environnement de serveur

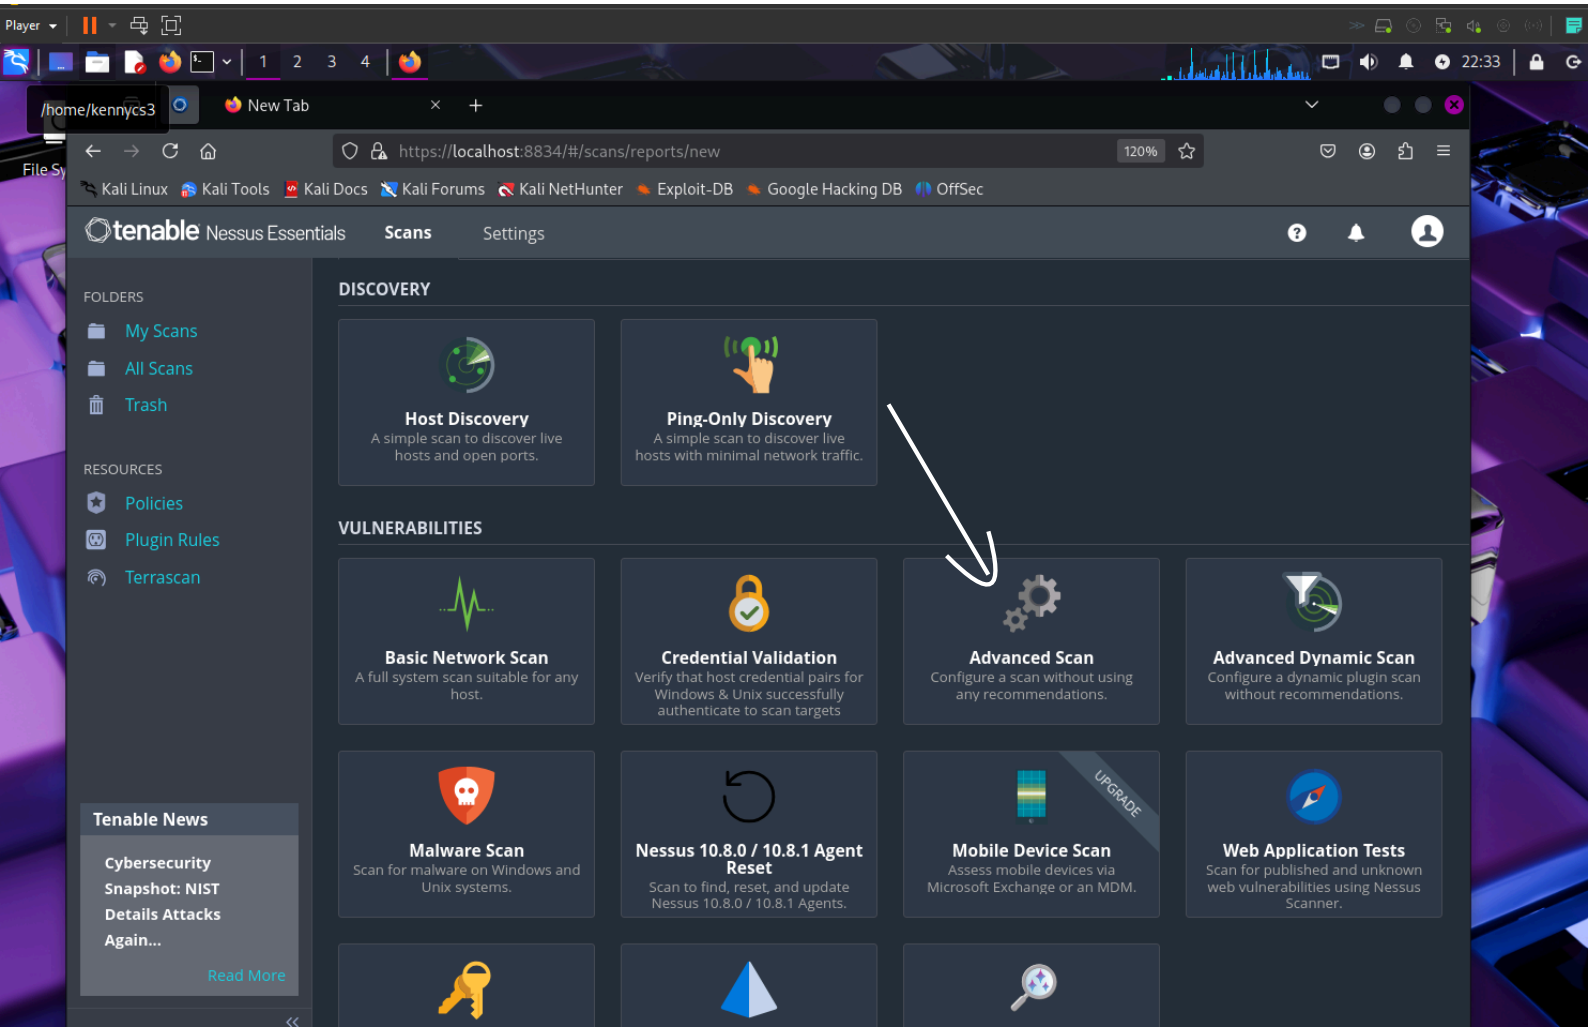

Pour réaliser l’environnement du serveur nous allons établir une connexion avec login et mot de passe

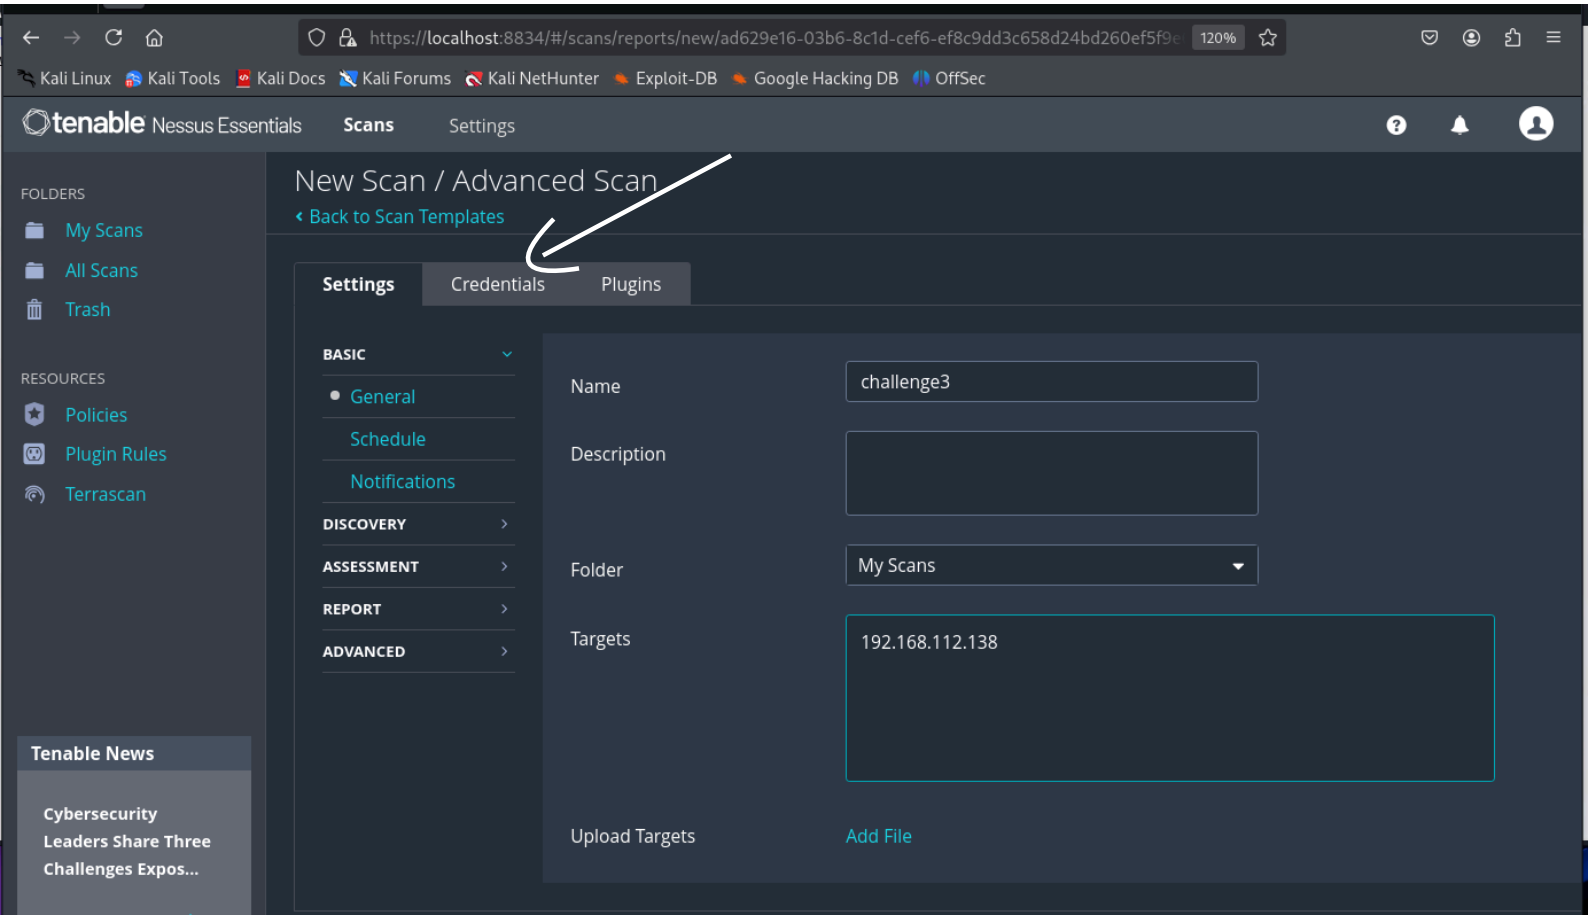

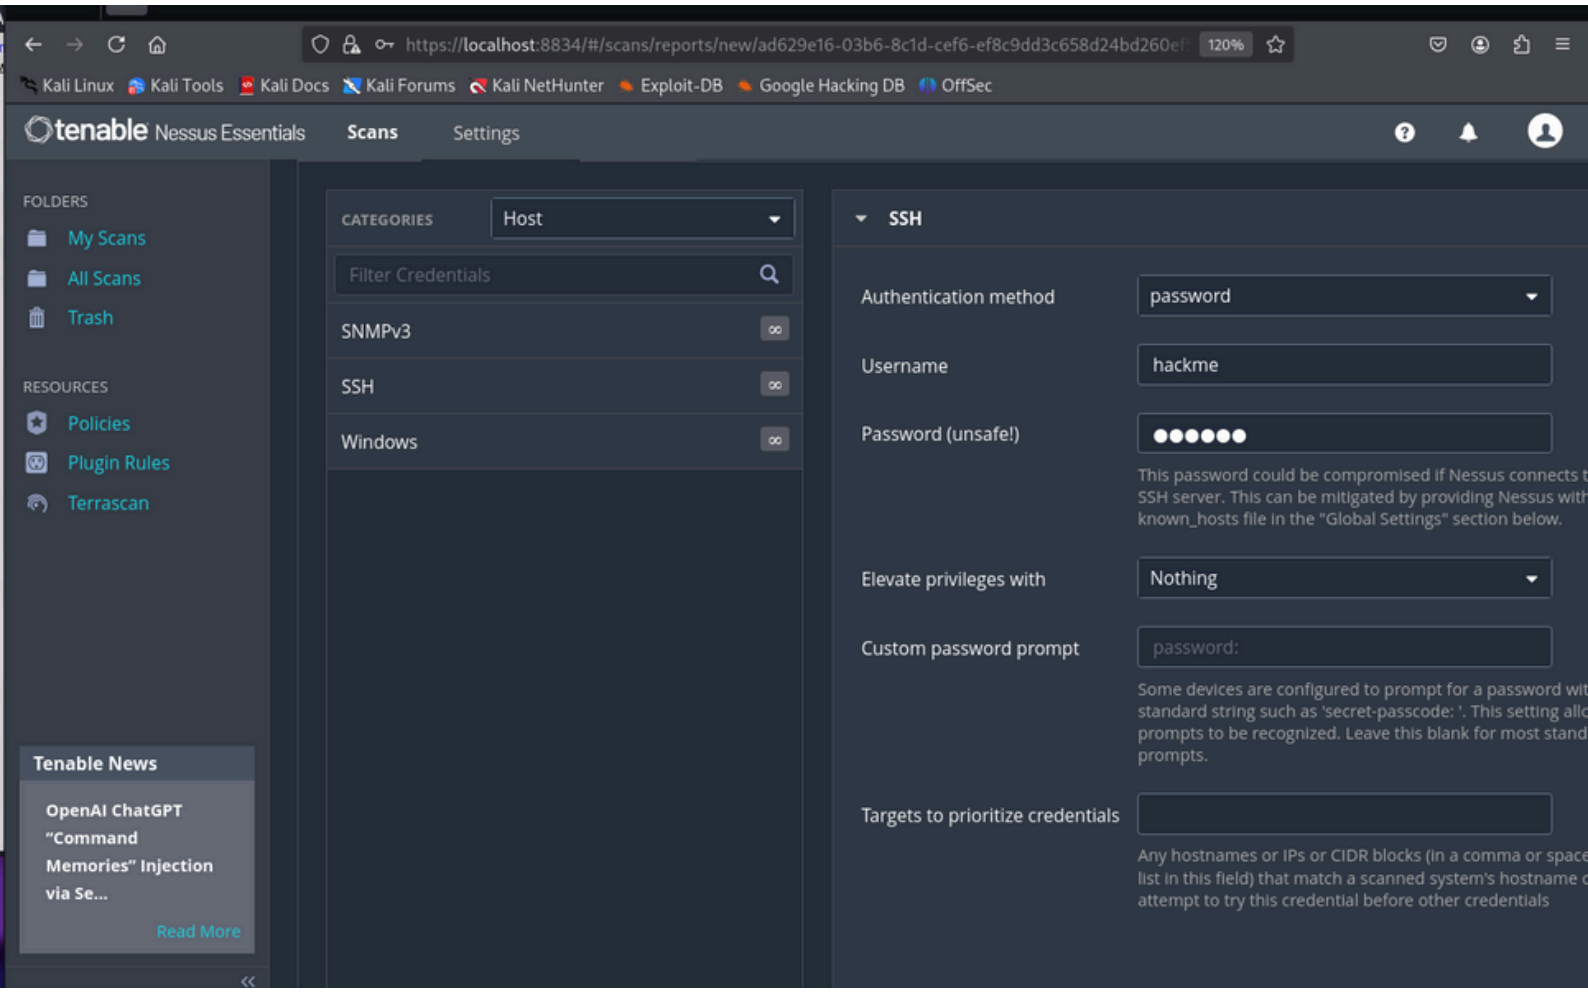

ici nous avons créer un utilisateur pour la connexion ssh avec comme:

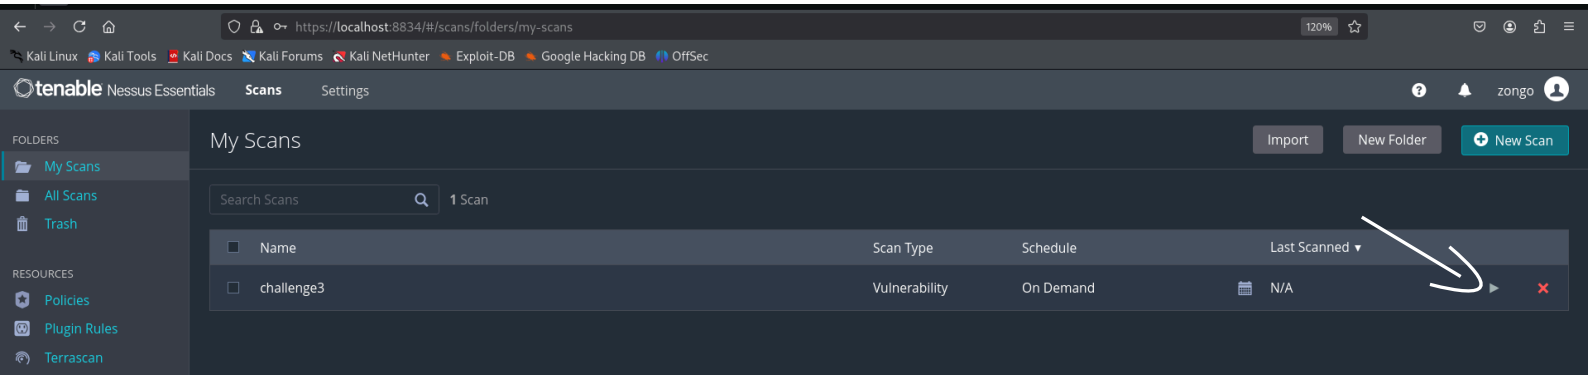

utilisateur/mot de passe → hackme/hackme

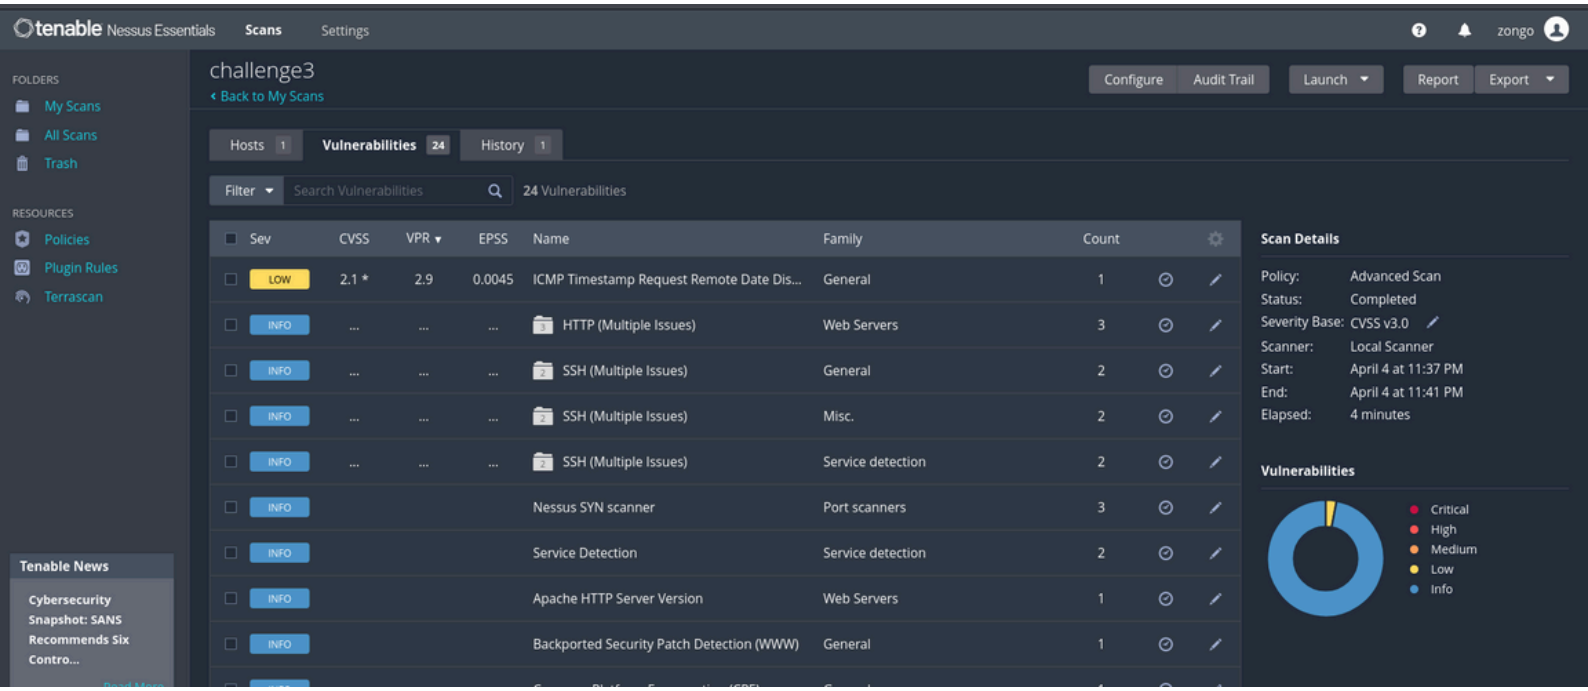

2. Créer le scan dans Nessus

DISCOVERY
Host Discovery
A simple scan to discover live hosts and open ports.
Ping-Only Discovery
A simple scan to discover live hosts with minimal network traffic.
VULNERABILITIES
Basic Network Scan
A full system scan suitable for any host.
Credential Validation
Verify that host credential pairs for Windows & Unix successfully authenticate to scan targets
Advanced Scan
Configure a scan without using any recommendations.
Advanced Dynamic Scan
Configure a dynamic plugin scan without recommendations.
Malware Scan
Scan for malware on Windows and Unix systems.
Nessus 10.8.0 / 10.8.1 Agent Reset
Scan to find, reset, and update Nessus 10.8.0 / 10.8.1 Agents.
UPGRADE
Mobile Device Scan
Assess mobile devices via Microsoft Exchange or an MDM.
Web Application Tests
Scan for published and unknown web vulnerabilities using Nessus Scanner.

Username
hackme
Password (unsafe!)
This password could be compromised if Nessus connects t
SSH server. This can be mitigated by providing Nessus with
known_hosts file in the "Global Settings" section below.
Elevate privileges with
Nothing
Custom password prompt
password:
Some devices are configured to prompt for a password wit
standard string such as 'secret-passcode: '. This setting allo
prompts to be recognized. Leave this blank for most stand
prompts.
Targets to prioritize credentials
Any hostnames or IPs or CIDR blocks (in a comma or space
list in this field) that match a scanned system's hostname c
attempt to try this credential before other credentials
